DETAILED ACTION

1. Claims 1-20 were originally presented.
2. Claims 8,10, were cancelled.
3. Claims 1-7,9 and 11-20 were re-examined and allowed.

Section I: Response to Applicants' Arguments (Dated 6/6/05)

Statutory Double Patenting Rejection

4. Rejection is withdrawn.

Obvious Double Patenting Rejection

5. Applicants are thanked for addressing this issue. Based on applicants' terminal disclaimer dated 6/6/05, the prima facie double patenting rejection is negated.

Section II: Allowable Subject Matter

6. The following is an examiner's statement of reasons for allowance:
7. The prior art of record doesn't expressly teach or render obvious the claimed invention as recited in claims 1. Specifically the allowable subject matter resides in the limitations, as recited in the context of entirety of the limitations of claim 1, directed to the creation of the following: *creating an echo-circuit that represents the plurality of parameters with nodes and time arcs, wherein the echo-circuit is stimulus independent, port-based, has no internal latch nodes, and is used in any static timing analysis (STA) tools, wherein the echo-circuit includes a dummy latch node that is controlled by an internally generated clock signal that becomes active when a latest clock signal from the circuit arrives at the output port, and wherein the echo-circuit enables a signal to*

propagate from an input port to an output port only if the signal arrives at the output port later than a latest clock signal from any pin clock signal controlling the output port...

Additionally, the prior lack teaching means for as stated in claim 11: *means for identifying relevant timing paths in the echo-circuit, wherein the relevant timing paths are associated with the plurality of parameters; means for identifying paths in the modeled circuit that connect sequential elements and correspond to the relevant timing paths in the echo-circuit; and means for comparing the relevant timing paths in the echo-circuit with the corresponding paths in the modeled circuit.*

Furthermore, the prior art doesn't teach or render obvious the claimed invention on computer medium as stated in claim 14.

Though the prior art of record expressly teaches the scanning of a series of dummy latches (Rizzolo) and constructing a model containing levels of latches with transparent edges (Avidan), neither art expressly stated or suggested the modeling of echo-signals. "A claim is anticipated if each and every element as set forth in the claim is found, with expressly or inherently described, in a single prior art reference."

Verdegaal Bros. V. Union Oil Co. of California, 814 F.2d 628 f.2d. 1226, 1236, 9 1053 (Red. Cir. 1987). "The identical invention must be shown in as complete detail as is contained in the...claim." *Richardson v. Suzuki Motor Co.*, 868 F.2d 1226, 1236, 9 USPQ2d 1913, 1920 (Fed. Cir.1989).

The motivation to combine the teachings of the prior art, including that which would have been known to one of ordinary skill in this art, was not uncovered so as to

render the claimed invention obvious. Dependent claims 2-7, 12-20 are allowable as they depend on allowed independent claims.

Section III: Examiner's Amendment

8. Authorization for this examiner's amendment was given per telephone interview with Kelly Lee (Registration Number #47,743) on 7/27/05.

Pg. 19 lines 16, insert "**330**" between port and will.

Pg. 20, lines 17, insert after nodes "**with input port 530**".

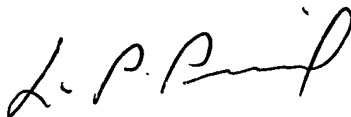

Pg. 21, lines 5, after 762. "**For the input port IN_1 731 and IN_2 732.**"
